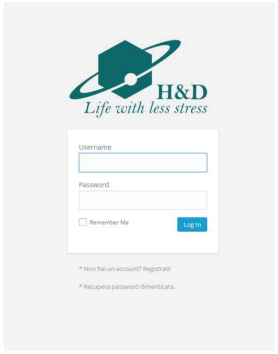
OB Manager Online Presentation

OB MANAGER Online is a proprietary software application designed to help healthcare professionals manage the interpretation of oxidative stress markers in an everyday clinical setting. As a medical term, oxidative stress indicates a pathological condition characterized by an imbalance between increased production and reduced elimination of reactive chemical species with oxidizing activity, commonly known as "free radicals."

The core of **OB MANAGER Online** is its specific algorithm where the clinicians can obtain a report of a patient's evaluation through both clinical data (personal information, clinical history, and medical office visits) and biochemical data (d-ROMs fast test, PAT test and Oxidative Stress Index results). The result will be an analysis and explanation of the patient's condition in relation to their oxidative stress status; their risk profile for oxidative stress; a series of suggestions regarding physiology, lifestyle, and potential exogenic factors that impact the level of oxidative stress; possible implications of iatrogenic factors; indications and posology of antioxidant therapies; suggestions for additional laboratory examinations that would help in the case's etiopathogenesis; and suggestions for the date of the next examination. Furthermore, each report is personalized according to the patient's clinical profile, which gives clinicians a unique mode of evaluation.

One of the software's features is the generation of reports of previous and current examinations, alongside additional documentation, such as the diagnostic algorithm and vitaminic requirements.

The new **OB MANAGER Online** is a highly versatile cloud-based software solution that can run on PCs, tablets, and smart-phones, making it a truly modern device that provides clinicians instant access to information. Additionally, the user-friendly guide for first-time customers contributes to a seamless experience.



One license of **OB Manager Online** is included with the acquisition of the dedicated analytical instrument **FRAS5** (Free Radical Analytical System).

The Author and the Proprietor of OB MANAGERTM decline any liabilities for possible errors contained in the software, for the performances of the software in relation to the above presented purpose and for the improper use of the software by the operator.
